ABOUT ME

Hi, I'm Enric, a developer from Barcelona. I started coding at university and immediately fell in love with its potential for problem-solving. I excelled in the programming subject and decided to shape my career around computing. Now, after having participated in many team and personal long-term projects, I see a correlation between my hobby, castells, and coding. Like constructing castells, coding requires teamwork, attention to detail and effective communication to develop reliable solutions. Reach out if you're interested in incorporating this mindset into your team!
